The twelve critical minerals behind Europe's defence and space industry: who controls them, and what changes this week.

- Updated daily
- Quoted by BBC News Chinese

01 · What OreOrbit is

One map of the minerals **your products need.**

OreOrbit is a public atlas of the 12 critical minerals behind Europe's defence and space industry. It follows 43 mines, refineries and plants and 11 trade routes in satellite and open data, together with the dates that can stop a delivery: export controls, quotas and sourcing rules.

It is made for the people who answer for supply: purchasing, engineering, risk and the board. In a minute you see which minerals a product needs, who controls them and what is moving this week.

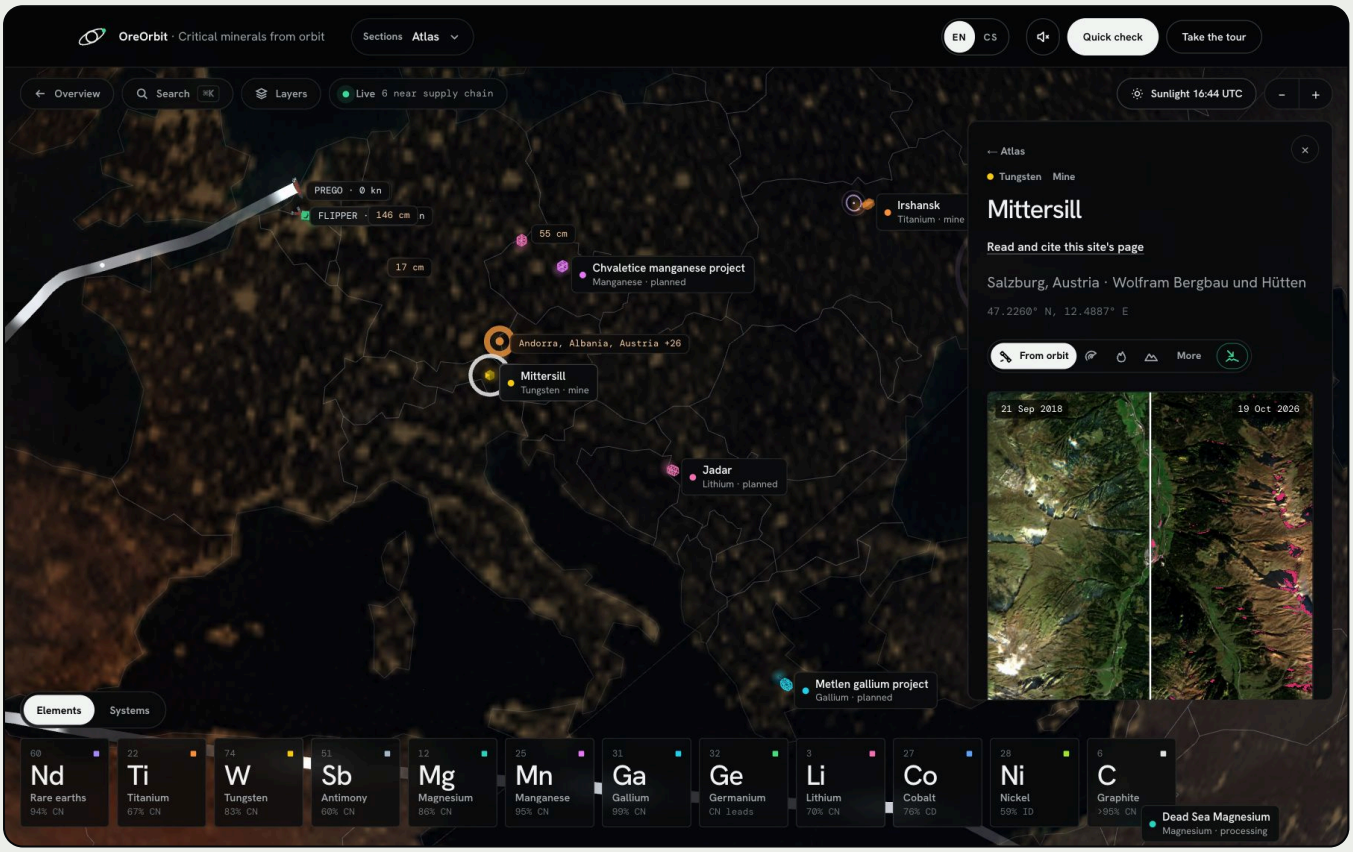

12	43	11	9 of 12
critical minerals	mines, refineries and plants watched from orbit	trade routes and chokepoints	have a stage where one country holds more than 65%

Where one country holds the most.

	Mineral	Tightest stage	Source
Nd	Rare earths	**94% China** · sintered magnets	IEA, Oct 2025
Ti	Titanium	**67% China** · titanium sponge	2023, USGS
W	Tungsten	**83% China** · mining	2024, USGS
Sb	Antimony	**60% China** · mining	2024, USGS
Mg	Magnesium	**86% China** · primary magnesium metal	2025, USGS
Mn	Manganese	**95% China** · electrolytic manganese metal	capacity, SMM 2026
Ga	Gallium	**99% China** · primary gallium	2024, USGS 2026
Ge	Germanium	China leads · no public world total	
Li	Lithium	**70% China** · lithium chemicals	2024, IEA
Co	Cobalt	**76% DR Congo** · mining	2024, USGS
Ni	Nickel	**59% Indonesia** · mining	2024, USGS
C	Graphite	**>95% China** · battery-grade graphite	2024, IEA

02 · The globe

Every site and route, **seen from orbit.**

Mittersill, Austria, one of the 43 sites: operator, coordinates, sources, and satellite pictures from different years side by side.

Gallium, picked from the bar: its tightest stage and the source.

Sites

Mines, refineries and plants, each with its operator, its sources and the last clear satellite view.

Routes and rivers

Ships through the chokepoints, river levels on the Rhine and the Elbe, and armed conflict near the supply chain.

Minerals

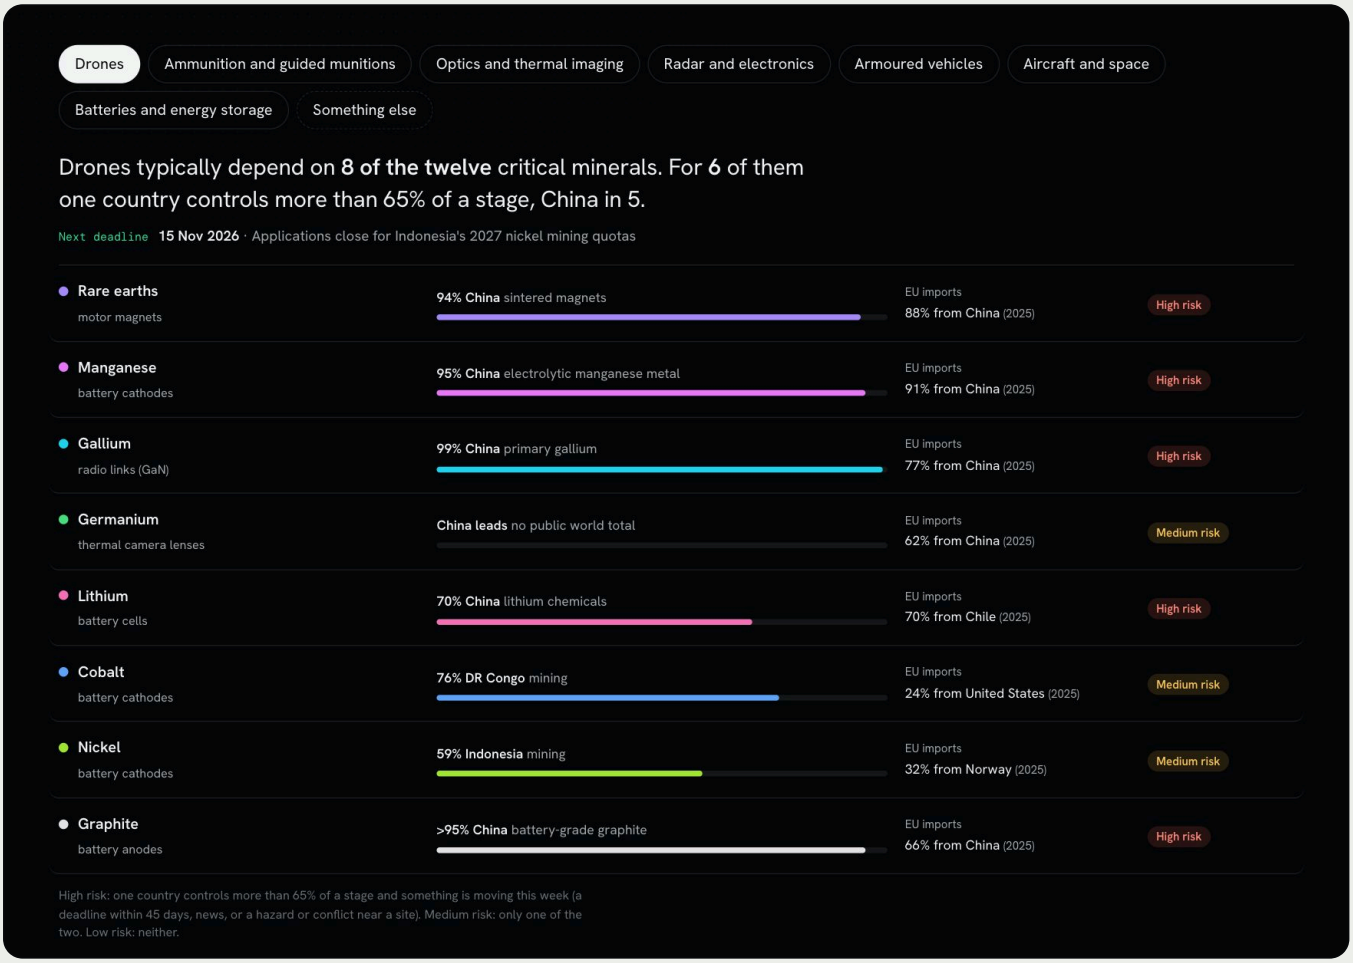

The twelve minerals sit along the bottom of the globe. Pick one to see only its sites and its tightest stage.

Screenshots from the live atlas, 11 November 2026. Contains modified Copernicus Sentinel data 2026.

03 · Quick check

Pick what you make. **See what it needs.**

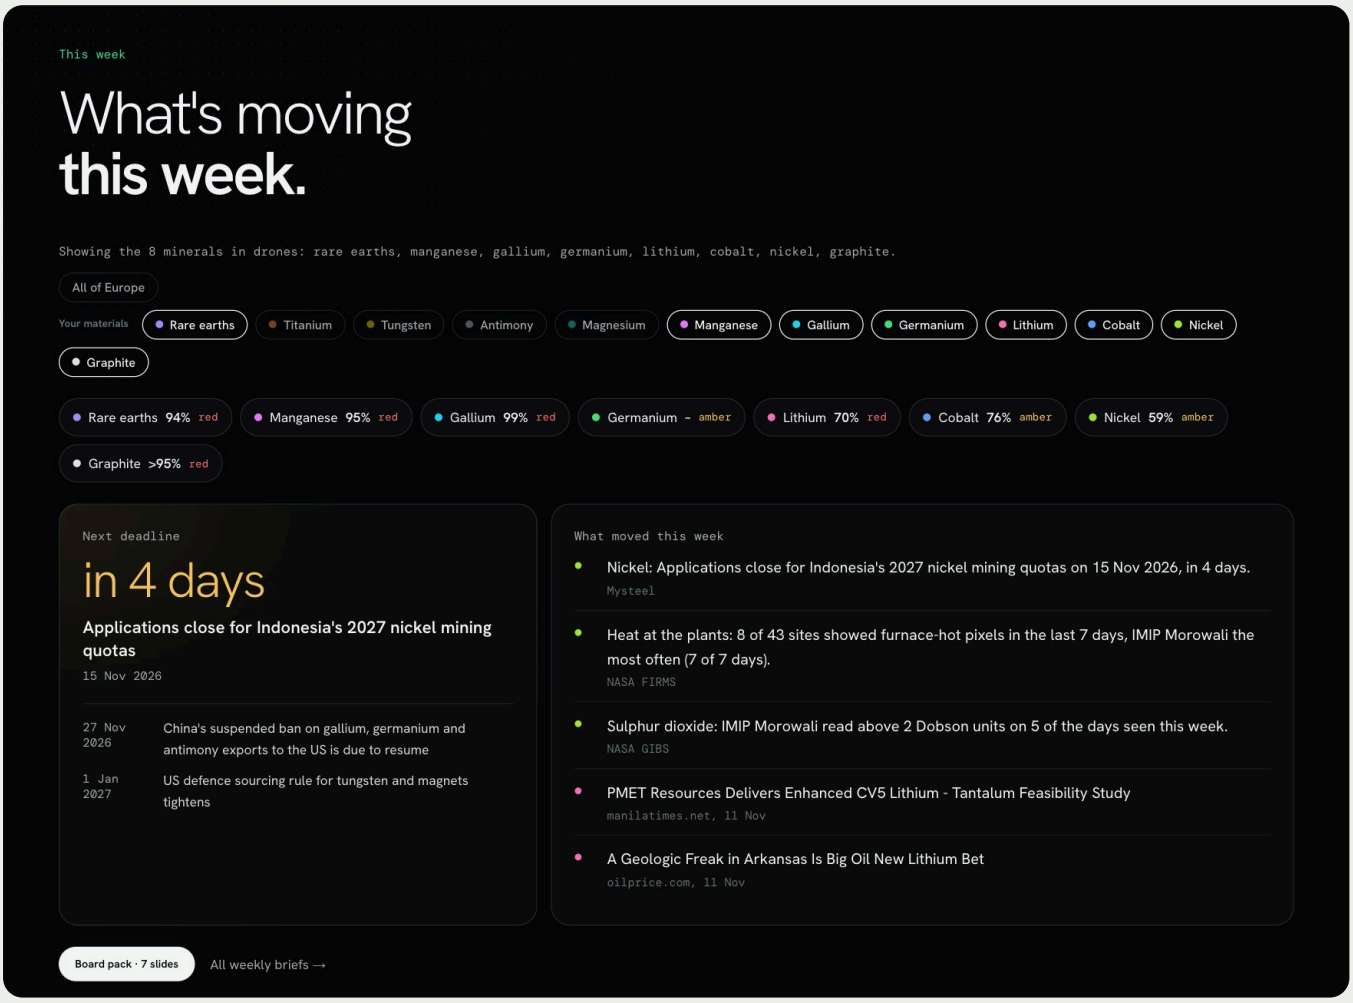

Drones, ammunition, optics, radar, armoured vehicles, aircraft and space, batteries. For each mineral: what it does in the product, the tightest stage, where the EU's imports come from, and a risk level that moves with the news.

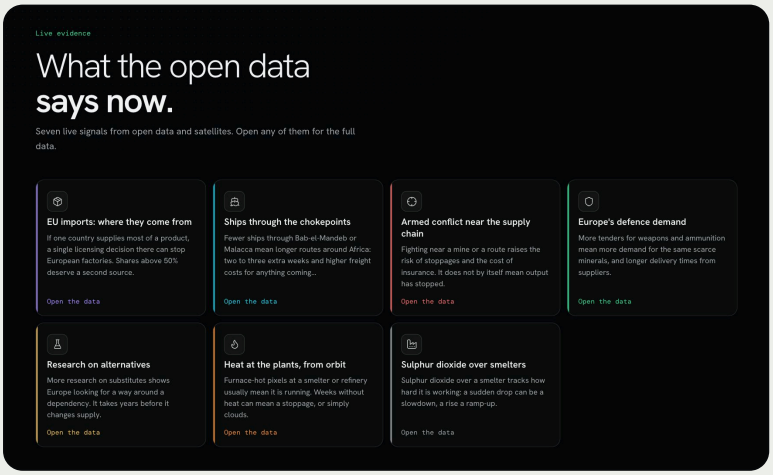

The quick check for drones, 11 November 2026. High risk means one country controls more than 65% of a stage and something is moving this week.

04 · This week

What moved, **and what comes next.**

This week, set to the minerals in drones: the next deadline, the dates after it, and what moved in the news and in satellite data.

The evidence behind it.

Seven live signals from open data and satellites: EU imports, ships through the chokepoints, armed conflict, Europe's defence demand, research on alternatives, heat at the plants and sulphur dioxide over smelters. Each one opens to the full data.

05 · Plans

Start free. Get alerted. **Get ready.**

01 · Free

€0

Open to everyone, no login.

The atlas: every site, route and mineral on the globe.

The quick check for your product.

This week: the next deadlines and the news.

With your email: the Monday brief for your minerals and every live-data panel in full.

Start: bohemiadefense.com/atlas

02 · Monitoring

€49 / month

Pay by card. Cancel anytime.

We watch your minerals, their sites and deadlines around the clock.

You hear from us when something changes, and every Monday.

Ask us one question a month. A person answers within two working days.

Includes a weekly data file for your minerals.

Start: the Monitoring section of the atlas. Choose your minerals and pay by card.

03 · Readiness review

Tailored

Scope, timing and price by email.

One product line in two to three weeks.

Your parts register, and stress tests against real export controls.

The rules that decide who can supply you.

Slides your board can sign. Supports Article 24 of the Critical Raw Materials Act.

Start: write to madali@bohemiadefense.com

What a monitoring client hears about.

- A new export rule, licence decision or major news on one of their minerals, the same day.
- A river too low for barges at Kaub, Duisburg or Dresden.
- Each deadline 30, 14, 7 and 1 day before it falls.
- A plant on their list going quiet or starting up in satellite heat and sulphur dioxide data.

Monitoring can be cancelled anytime. If you do not see the value, we refund you within the first month.

06 · How to start

Start with the quick check. **It takes a minute.**

01

Open the atlas

bohemiadefense.com/atlas, no login. Run the quick check for what you make.

02

Get the Monday brief

Leave your email under This week. Every Monday: the deadlines and news for your minerals.

03

Choose how far to go

Choose your minerals in the Monitoring section and pay by card. For a readiness review, write to us and we send the scope and price by email.

David Madali

Founder of Bohemia Defense. A Prague-based analyst of the defence industry, critical raw materials and the space economy, and creator of OreOrbit.

Before Bohemia Defense: economic diplomacy at the Czech Ministry of Foreign Affairs, and export consulting at CzechTrade, where he set up an informal cluster of twelve security-industry companies. BBC News Chinese has quoted him as an analyst.
